1 ABSTRACT

2 Described herein is an enabling product that facilitates implementation of an m-
3 commerce business solution. According to an embodiment of the present invention an m-
4 commerce solution includes: a content provider or merchant site that provides products and
5 goods to be purchased; a payment system allowing online authorization of funds to purchase the
6 goods; and a wireless network for all customer interactions. Embodiments described herein
7 perform at least one of the following three functions: 1) protocol conversions; 2) customer
8 information reposing, and 3) payment authorization system interfacing.
